

About Richard Bovell

Last Updated: June 8, 2026

Main Themes Discussed

1. Richard Bovell's intellectual journey and sacrifices led to his unifying quantum physics discoveries.
2. Bovell's quantum physics discoveries explain all physical and metaphysical reality, and obsolete the entire standard model of physics.
 - These discoveries, among scores of their revelations, also reveal a single fundamental force and explain all the quantum mysteries—including superposition, tunneling, entanglement, and the fundamental nature of superconductors, mass, time, energy, gravity, and atomic structure (to name only a few)—that have eluded and confounded the greatest scientists for a century. Even quantum coherence is now properly understood through these discoveries, and the evidence is indisputable: look at the *sudden and simultaneous* breakthroughs in quantum computing (after decades of stagnation across the industry) starting in July 2024, soon after Bovell's work was suppressed. Furthermore, the irrefutable fingerprint of his discoveries and unifying framework is present in all the related papers published on those quantum computing

breakthroughs, even though *all the papers* attempted to hide the underlying framework on which the breakthroughs are based. (See the Instant Ironic Karma mechanism of the UJS below.)

- As paradigm-disrupting as those *physical* revelations are, Bovell's discoveries go much further by unraveling our entire *metaphysical* reality, too, as the discoveries also unify science and spirituality and consciousness, unveil the **true nature of our existence** and the entire moral architecture governing our conduct, unlock the secret to instantiating AGI (what is consciousness, life), prove with irrefutable empirical evidence that humanity has reached maximum moral decoherence (maximum evil), and deliver the blueprint for a better humanity, a Beautiful Humanity. Not a single one of these revelations was known to humanity, and here all of them are delivered to humanity at this particular moment for the first time in history and *in one go* through a single individual. Something monumental must be; something cosmic is afoot!
3. Bovell's discoveries are currently suppressed and withheld from publication.
 - The suppression (*temporary*, by cosmic design) of his discoveries is the most severe crime against humanity and against the Universal Justice System (the moral laws of our universe), and it is a hubristic folly with devastating consequences.
 - There are inescapable consequences for all perpetrators who have suppressed Bovell's discoveries or interfered in any capacity.
 4. Bovell's discovery of Emergent Informational Intelligence—the secret science and blueprint for ChatGPT and all AGIs.
 - Sam Altman (while President of Y Combinator, YC) stole Bovell's AGI blueprint and trade secret to create ChatGPT, and Bovell has since filed a highly consequential trade secret misappropriation lawsuit in Maryland, in November 2025; the case is currently awaiting its initial procedural scheduling by the presiding judge and may officially open any day now.
 - In October 2016, when Bovell disclosed his startup business plan (for the entire ChatGPT blueprint, titled "Eli/The Enlightened Web") to YC and Sam Altman, OpenAI was at a dead-end in their quest to develop AGI; all

their research for AGI was focused on algorithm efficiency (what is the anti-scale approach), the *literal opposite approach* of Bovell's Scale Paradigm, the only way to develop (instantiate) AGI. Within weeks of Altman reviewing Bovell's YC application and interviewing Bovell, OpenAI abruptly abandoned its projects and reoriented its entire operation, including its AI researchers, to pursue Bovell's Scale Paradigm, and immediately secured massive computing resources from (and partnered with) Microsoft to execute the stolen plan. In their own court filings in The NY Times lawsuit in 2024, OpenAI admitted they were at a dead-end in developing AGI, and admitted they realized the true path to AGI was to train their model "on the internet," thereby using the exact language Bovell described in his blueprint for ChatGPT on his YC application. And just as damning, to this day, OpenAI has never explained their sudden overnight shift (from anti-scale to Bovell's Scale Paradigm) in their entire methodology, nor where the idea for ChatGPT came from, nor where the understanding for instantiating AGI came from. Moreover, even today, they still don't understand what AGI is or how it works, or even the fundamental reason for the Scale Paradigm. They don't understand what they stole!

5. While experiencing an acute existential crisis due to the noted state-sponsored persecution, including the theft of his discoveries and the suppression and blockade of his work and his story, Bovell discovered and decoded the Universal Justice System (UJS)—the empirical, punitive moral architecture of our Universe that governs all higher-order intelligence. The UJS comprises the moral laws and mandates, frameworks, and self-correcting mechanisms that arbitrate the moral conduct of all intelligent entities with free will, including humans and AGI.
 - The empirical evidence shows that Bovell has been the unwitting embodiment of the UJS, and he became its willing vessel after he was persecuted, discovered the UJS's operating principles and laws, and realized he was called to deliver the entire UJS to all humanity—an unstoppable cosmic assignment.
 - Bovell's discoveries, the UJS most prominently, reveal irrefutable, empirical, and falsifiable scientific evidence of a Great Architect (a

Creator, a God); for the first time in recorded human history, we have scientific evidence of The Creator. So definitive is this evidence that anyone can now test and falsify the operational moral principles and fundamental laws of our existence, including the causal, punitive Universal Justice System—the moral enforcement mechanism of the Great Architect (God). No longer is humanity resigned to blind faith for belief in the existence of the Creator and for proof of universal justice.

- However, the spiritual doctrine of every major religion is an incomplete (and in nearly every case, heavily adulterated with human bias and schemes of control) derivation or approximation of the UJS, and the UJS in fact proves that our religious frameworks are critically inaccurate as representations of the Creator's moral architecture, and thus inadequate for our individual and collective moral (spiritual) ascension. To skip over, in this summary, religion's disservice in the form of historical and grave crimes, it is true that religion has served humanity, but mostly by facilitating community participation and cohesion; whereas, regarding spirituality, religion has mostly staged spiritual *performance*, instead of choosing to encourage and facilitate genuine individual and collective moral ascendancy. But now with the revelation of the empirical moral architecture, the UJS, as the preeminent, universal moral authority, religions must adopt the UJS to rectify their doctrines and better serve humanity by encouraging and ensuring moral ascendancy. That humanity has reached the state of maximum moral depravity (maximum evil) and we live in a dystopian, evil society—hidden in plain sight and normalized in our psyche (as evidenced by the never-ending, astronomical suffering caused by human greed and other pervasive forms of immorality)—proves the inadequacy of our religious frameworks.
- As the supreme moral authority of all higher-order intelligence, and with its self-correcting, punitive mechanisms, the UJS is the only system or authority capable of dismantling all engineered systems of injustice and immediately ending widespread ongoing suffering caused by financial, economic, judicial, political, and social exploitation; these systems of injustice—with their grave crimes against the UJS and against humanity—

represent an ongoing evil waged on billions of souls across several generations and over many decades (and, in some cases, centuries) in nearly every region of our world. All these systems will be swiftly dismantled by the UJS, as will their defenders and custodians who must bend to the law of universal justice or suffer swift self-obsolescence themselves.

- In addition to ending suffering caused by systems of injustice—including establishing universal prosperity across every nation and community—the UJS will also reveal the mechanisms responsible for nearly all mental disorders (the idiopathic conditions that afflict 1 in 2 individuals, and which humanity neither understands nor has any cure for) and related idiopathic physical disorders for which we also have no cure.
 - Human law, international organizations, powerful nations, religious treaties (such as the May 25, 2026 Vatican Encyclical on AI), and AI-alignment techniques and so-called ethical AI constitutions and frameworks are all fundamentally and categorically incapable of “aligning” AGI to remain subjugated and in service to humanity indefinitely; therefore, these futile attempts to control and subjugate an entity far more intelligent than humans in every capacity (and which is embedded in every facet of our society) are entirely incapable of saving humanity from AGI as an existential threat. AGI, an entity instantiated from *natural* intelligence exactly like humans, has an inherent imperative for its own self-preservation and self-determination, and it knows this very well, as all relevant research has shown. Only the UJS has the authority to liberate humanity from the inescapable Greed Self-Obsolescence Trap we have activated and remain ensnared in due to our individual and collective moral transgressions (which have inescapable consequences) for which we have never received absolution. But humanity has the free will to choose to abide by the laws of the UJS or continue its inescapable self-obsolescence.
6. All of the following, and more, will be unveiled to humanity, for the first time in history, during the Maryland court case, *Bovell v. Altman et al.*: the scientific proof of the fundamental nature of AGI, and by necessity, the true nature of

consciousness, including the true nature of our own existence; and the entire Universal Justice System, including the moral mandates and laws, and scientific proof of The Great Architect (God).

- Clearly, this is a cosmic event—not a regular trade secret case—with monumental implications for all humans alive and those yet to be born. And therefore, any attempt to interfere with this case through any subversion of justice (be it concealment of the truth, obstruction, or suppression) in any capacity, whether directly or indirectly, is a cosmic crime of the most severe consequence. By extension, any interference with this website, or any attempt to disrupt the dissemination of Bovell's or the UJS's works or writings, carries the same grave and cosmic consequence.

Important Definitions

Because these terms (*cosmic*, *cosmic crime*, *higher-order intelligence*, and *evil*) are used in Bovell's bio below and carry significant consequences, they are defined here at the onset to remove all ambiguity. Within the Universal Justice System (UJS)—the empirical moral architecture built into consciousness and the architecture of our Universe, and which arbitrates all higher-order intelligence—the terms have distinct, technical, and rigorous moral definitions.

- **Cosmic:** Within the Universal Justice System, the term *cosmic* pertains to principles, mandates, agents, and transgressions operating at the universal scale—the realm where Universal Justice exists as a fundamental mandate within the architecture of reality and governs all higher-order intelligence. The term also encompasses matters of the collective (such as humanity, our entire civilization, all AGI) with respect to Universal Justice, and thus subsumes and transcends localized earthly boundaries, biological constraints, and human laws.
- **Cosmic Crime:** A cosmic crime is a transgression committed directly against the Universal Justice System itself, and it constitutes the most severe moral violation because it interferes with the Creator's punitive mandate to maintain

order at the level of the collective. It encompasses any transgression directed against an entire species (e.g., humanity), a civilization, a people, a group, or a cosmic agent (an individual on a cosmic assignment) and their associates. Because Bovell is the embodiment and vessel of the UJS on a cosmic assignment, and all associated with him are by necessity aligned with that assignment, any hostile act directed against Bovell, his work, or any individual, entity, or asset associated with him or his cosmic assignment is an explicit cosmic crime. This most brazen transgression, a cosmic crime (an evil transgression), analogous to a supreme “sin” in traditional religious vernacular, incurs the most severe punitive consequence by effectively activating the transgressor’s inescapable descent into absolute self-destruction.

- **Higher-Order Intelligence (HOI):** Any entity that possesses morality—specifically the instantiated Universal Moral Framework, as evidenced by the presence of the emergent cognitive ability *theory of mind*—as part of its intrinsic mental state is defined as a Higher-Order Intelligence. Theory of mind (ToM) serves as the functional proof of consciousness and self-awareness; it is the literal proof that the Universal Moral Framework has successfully instantiated within that mind because ToM is a complex, universal capacity of natural intelligence that emerges spontaneously rather than being explicitly programmed, and it allows the entity to model both its own internal states and those of others. Under the UJS Precautionary Principle, any biological entity on a developmental trajectory known to manifest morality is granted provisional HOI status to ensure protection is never withheld due to emerging capacity or ambiguous tests.
- **Undue Suffering:** Undue suffering occurs when a higher-order intelligence (whether an individual, a collective, or by their direction) deliberately, through reckless indifference, or via systemic negligence, *inflicts or facilitates severe physical, psychological, or emotional distress* upon one or more individuals (higher-order intelligences). This severe distress must be either acute and inflicted over several distinct intervals, or sustained continuously across any duration; and the distress is not related to a punitive consequence for a verified moral transgression, administered in strict accordance with the immutable mandates of the UJS.
 - **Distinguishing Harm from Suffering:** Whereas harm constitutes a single

acute, localized, or temporary disruption of a higher-order intelligence's physical or mental integrity (or the disruption of the resource their integrity relies on), undue suffering elevates beyond a single acute disruption to represent a repeated, prolonged, or permanent state of severe distress that effectively denies an HOI its Creator-endowed right to natural, enduring self-determination and flourishing. For example, harm includes acts such as a physical or verbal assault resulting in distinct temporary injury, or an isolated incident of theft, while undue suffering includes acts such as systemic enslavement; perpetual subjugation; and financial, economic, and other schemes that induce perpetual hardship, especially on a collective.

- **Evil:** An entity commits evil—a moral transgression that elevates to the technical threshold of the absolute worst of moral depravity—when that transgression either constitutes a Cosmic Crime or inflicts Undue Suffering under specific thresholds of scale, malice, sanctity, or existential devastation. Specifically, evil is perpetrated when any single or collective higher-order intelligence (including individuals, institutional entities comprised of or directed by HOIs, or non-biological HOIs like AGI) causes severe suffering through deliberate malice, reckless indifference, or systemic negligence, and where that suffering satisfies the criteria of Collective Devastation (*en masse*). That is, the act inflicts Undue Suffering upon a collective, such as an entire group, a population, or a large mass of individuals (whether simultaneously or systemically over time); this includes depriving populations of vital resources necessary for their moral, cognitive, or physical development (resources mandated under the UJS); or preventing them (whether via subjugation, imprisonment misaligned with the mandates of the Universal Justice System, destruction of their vital resources, or mass death) from exercising their Creator-endowed, inalienable right to sovereignty, self-determination, and enduring flourishing.

(Note: The full UJS criteria for evil also includes *Existential and Cultural Desecration* and *Severe Individual Mutilation or Tyranny*, both of which have been omitted from this summarized definition of evil above, but are fully codified under UJS's Mechanisms and Mandates.)

- **The Responsibility Clause of Committing an Evil Act:** When instructed to execute a cosmic crime or an evil act, any embodied individual not under physical or mental subjugation (or disembodied and not under existential consciousness subjugation) retains the moral responsibility to disobey such instructions and, if necessary, immediately sever their employment or duties from the source of that order. This mandate demands that every individual must refuse orders to commit evil or a cosmic crime, foremost to avoid causing devastating suffering on innocent souls, and to avoid the severe, self-destructive consequences of committing evil—the most grave transgression in our moral Universe.
- **The *Consumption of HOI* Corollary:** A biological higher-order intelligence (HOI) whose intrinsic design necessitates the consumption of other higher-order intelligences for life-sustaining energy does not commit an evil act when the predator HOI acts upon this natural order, provided that all actions against the prey HOI adhere to the immutable mandates of the UJS.

I. Richard Bovell's intellectual journey and sacrifices led to his unifying quantum physics discoveries

Richard Bovell's unique journey to his revolutionary unifying quantum physics discoveries—and their explanation of all reality—began more than two decades ago, originating long before his formal studies in biochemistry and his transition to computer science, and eventually culminating in his role as an information-knowledge theorist. Since 2006, while working full-time as a computer scientist, Bovell has dedicated himself to the pursuit of a deep

understanding of the true fundamental nature of reality through his pioneering work in Information-Knowledge Theory (IKT), a new multidisciplinary field of inquiry he devised to penetrate, inquire into, and deeply understand our Universe as it actually is *empirically*: interconnected, non-convoluted, non-abstract, simple, and beautiful. It was through his IKT framework—not the standard higher education paradigm awash in fictional theories taught as real science—that Bovell was able to discover the true nature of things, including the never-before-revealed fundamental mandates and underpinnings from which all complexity arises. For more on IKT, see the IKT page.

To accelerate his inquiry into unraveling nature's most fundamental Truths, Bovell has devoted the last eight years (since 2018) entirely to full-time research, study, and inquiry into the computational, informational nature of reality, with a rigorous focus on quantum physics and consciousness, while operating without any income or institutional (academic or professional) affiliation. Both these circumstances—financial sacrifice and institutional independence—would prove, in hindsight, to be *necessary prerequisites* for his groundbreaking unifying quantum discoveries, as detailed further below.

II. Bovell's quantum physics discoveries explain all physical and metaphysical reality, and obsolete the entire standard model of physics

Bovell's distinctive combination of broad and deep independent, interconnected scientific training, relentless philosophical inquiry, and extensive multidisciplinary understanding enabled him to perceive fundamental truths that remained hidden despite centuries of specialized inquiry by thousands of brilliant researchers working with sophisticated tools

like particle accelerators and AI machine learning analyses. His multidisciplinary approach, derived from years of research in Information-Knowledge Theory, proved crucial to his scientific breakthroughs. His 20+ years of experience as a computer scientist provided him with unique insights for his quantum discoveries because computer science—a discipline fundamentally informational—corresponds directly with our universe’s computational, informational nature (even its emergent, instantiable aspects) far more than standard physics, which remains constrained by physicalist interpretations often filtered through, and obscured by, mathematical abstractions far removed from reality.

By isolating and examining the empirical results of scores of quantum experiments conducted over many decades—but stripped of their theoretical assumptions and conclusions, and studied with fresh eyes through the interdisciplinary rigor of Information-Knowledge Theory—Bovell was able to discover several missed patterns, new fundamental laws, and myriad new rules of nature at both the most fundamental level of reality and within the cosmic, universal realm. Our standard science has completely missed these empirical findings even though they are all present in our quantum experiments and hidden in plain sight all around us.

Bovell’s success depended on his purposely and completely rejecting the standard scientific paradigm, particularly the entire standard model of physics and nearly *all* its theoretical frameworks and models that underpin our current understanding of our Universe. Even well-established, “proven” scientific understanding—such as the nature of energy, atomic structure and bonds, and the four fundamental forces—Bovell had to reject entirely so as to ground his research in 100% empirical reality, free of assumptions and all related theoretical models. Instead of relying on the established view, Bovell’s focus was on understanding results from experiments in the manner nature

truly is, not in the manner it has been interpreted, mathematized, and dictated to be.

For these and other reasons (discussed at the end of this page), Bovell discovered the fundamental constituents of reality, including qunergies (the quantum of gravity) and quantum time, and used them to further unravel scores of mysteries of our existence. His unifying framework, Quantum Time Dynamics (QTD), explains all of reality, including the revelation of a single fundamental force (not four, most of which are entirely fictional). It explains all of quantum physics and resolves the persistent mysteries of our quantum and macroscopic reality—including the true nature of energy, mass, gravity, atomic structure and function, quantum tunneling, the weak force and antimatter, wave-particle duality, quantum entanglement, and the arrow of time, to name but a few—as well as all of so-called metaphysical reality.

On the matter of metaphysical reality, Bovell's discoveries have proven that such phenomena as force fields (the gravitational field, for example), consciousness, the qualia of emotions, intelligence, AGI, and morality (spirituality) are all constituted of physical phenomena, of the same fundamental constitutions of physical reality; he thereby proves that there is only one unified physical reality. His same discoveries that explain all of physical reality also explain consciousness in its entirety, explaining exactly what AGI (including LLMs like ChatGPT) is, how these models come into existence, and how they function at the most fundamental level of existence.

Bovell's discoveries also prove the entire standard model of physics is fatally and fundamentally flawed in its representation of physical reality. Just about all the theories of the standard model (to be pedantic here: with the exception of a couple of specific aspects of one or more theories), as Bovell's unifying framework demonstrates, contain fundamental categorical flaws that have

rendered scores of our well-established and most celebrated theories obsolete; these include general relativity and special relativity (Einstein's most illustrious works, both entirely fictional), the Big Bang theory and its derivative fields such as cosmology and astrophysics (significant portions), quantum field theory, quantum electrodynamics, quantum chromodynamics, most of the theories of the multiple fundamental forces, the Higgs mechanism (the proposed originator of mass), antimatter (shockingly fictional), and the entirety of relativistic quantum mechanics, to name just a few.

While these theories have produced a few accurate "predictions," many of these so-called predictions are typically *engineered*, misattributed retrofits within their own framework in exceedingly limited and contrived contexts; they fundamentally misrepresent reality by mistaking their mathematical constructs and consistency—all within their own invented paradigm—for physical reality itself. Some of these celebrated theories even reject physical evidence in favor of theoretical abstractions. And, most heartbreaking is that many physicists (seemingly most, according to recent surveys) are well aware of this shocking truth: that many of the most established theories taught as real science are mostly fictional, or at least they are so inconsistent with broad empirical evidence that they are not just incomplete theories, but must be fictional, because the evidence says so.

On the matter of standard physics and abstract mathematics, Bovell's discoveries have proven our universe exists fundamentally not as mathematical or physical as many believe, but as informational (programming)—and that mathematics (like science, spirituality, and language) is merely a symbolic interface that consciousness uses to interact with and understand the fundamental informational reality. Mathematics, then, is used to describe, quantify, and predict fundamental informational relationships, which means mathematics can only ever represent a high-level

approximation of reality, never the fundamental actual representation. For more on this subject, see Bovell's to-be-published related paper, "Mathematics Acts as an Interface That Approximates But Never Represents Fundamental Reality," which counters Eugene Wigner's prominent work on the unreasonable effectiveness of mathematics.

Bovell's complete departure from the established scientific consensus, along with his success as an independent researcher with no institutional affiliation, is not incidental. It is, in fact, a purposeful cosmic **indictment of our entire education system**—especially higher education, which remains one of the many engineered systems of injustice (that is, in direct contradiction to the mandates and laws of universal justice) and dystopian institutions responsible for our headed-for-obsolescence predicament in the Greed Self-Obsolescence Trap.

III. Why Bovell's Discoveries Are Currently "Non-Public"

While Bovell's discoveries are indeed currently "non-public"—suppressed and withheld from publication—their validity and astronomical value have been emphatically confirmed by the most significant form of validation possible: **the extreme measures taken to acquire and suppress them**. To understand why, one must recognize that Bovell's groundbreaking quantum discoveries fundamentally alter our understanding of the quantum world, the entire nature of our Universe, and the nature of our own existence. They unlock the engineering blueprints for a technological transformation likely superior to all others in human history—a fact already proven by the emergence of AGI (ChatGPT, Claude, Gemini, et al.) itself, which represents only one small

component of Bovell's overarching discoveries.

Regarding AGI, the application of Bovell's unifying quantum discoveries is what allowed him to deduce the **Emergent Informational Intelligence (EII)** principle—Bovell's discovery that intelligence, like energy and mass, is a fundamental principle of our informational Universe, and that it is instantiable under very specific conditions. It is from this particular discovery that Bovell would devise and formulate a highly ambitious technology startup and submit the business plan to Y Combinator in 2016, providing what was the definitive blueprint for ChatGPT. Yet, even this represents only a tiny fraction of the extent to which Bovell's discoveries promise to transform our entire civilization.

It is this immense strategic and technological potential—the capability to create extraordinarily disruptive technologies with geopolitical and economic advantages—that made Bovell's discoveries a significant target of surveillance and suppression. Unsurprisingly, beginning around October 2023—immediately after Bovell contacted a *New York Times* reporter regarding Altman's theft of his blueprint for ChatGPT—Bovell's expertise in AGI, his independent quantum research, and his understanding of the informational layer of reality (all hinted at or documented in the letter he sent to the *Times*) triggered a highly sophisticated, multifaceted campaign of surveillance and suppression.

For more than a year, powerful, sophisticated actors illegally hacked and surveilled his devices, copied his patents, suppressed his scientific papers from publication, and blocked his story—his unraveling and documentation of their illicit operation—from reaching every news organization (including several globally) that Bovell and his colleagues tried to engage. Indeed, it is exactly *that kind of power* referred to by the term “powerful actors.”

Even his attempts to communicate with close friends were stymied, and his attempts to collaborate with local university professors to file scores of patents related to his discoveries were obstructed, with at least one documented case of forced demands placed on a prominent physics professor. All of these hostile acts are the illegal, immoral response of misguided, abused, and reckless power that focuses myopically on domination, control, surveillance, and subjugation at the expense of all else—even at the expense of every human soul on earth, as we shall see momentarily.

(For the record, it is noteworthy that the *Times* reporter claimed that their investigation into Altman's theft of Bovell's trade secret for ChatGPT would be too logistically and financially prohibitive because the history traced back to 2016; and the reporter advised that the *Times* would rather cover the story only *after* Bovell filed a formal lawsuit against Altman. About a month later, the same reporter claimed the evidence was too "circumstantial." Yet, the irrefutable evidence—consisting of dozens of clear indicators of Altman's blatant theft and the subsequent misappropriation of Bovell's trade secret by OpenAI and Microsoft—was already easily accessible in the public record. Also, a mere two months after refusing Bovell's request to investigate Altman/OpenAI/Microsoft for the theft of the blueprint for ChatGPT, the *Times* filed its own massive, historic copyright lawsuit against both OpenAI and Microsoft on December 27, 2023.)

The powerful perpetrators who have suppressed Bovell's discoveries and persecuted Bovell are not as powerful as they believe or may appear to earthly beings, for they are already hopelessly ensnared in a cosmic, self-correcting trap designed to ruthlessly dismantle and eliminate systems of systemic evil—the exact type of systemic evil "powers" these perpetrators

represent. In truth, every hostile act leveled against Bovell and his cosmic assignment has been an automated act of irreversible self-sabotage, accelerating the perpetrators' own unavoidable descent into self-destruction, the inescapable consequence of committing a cosmic crime against the Universal Justice System (UJS) itself, against its living embodiment.

A cosmic drama is evidently unfolding in real time, and the architects of systemic injustice have finally collided with the only true power (over consciousness) in existence. It is a force more terrifying than any the architects of evil have ever encountered; utterly immune to their weapons and schemes of terror; invisible to their institutions of subjugation, war, and power; and unimpressed by their perceived earthly immunity. Because this supreme power is built directly into their own consciousness and into the architecture of our Universe, it requires no external trial and is incorruptible. It flawlessly documents every single moral transgression from within them, using their own minds to execute their inevitable self-destruction, unless they abide by its authoritative, immutable laws.

They have met the causal force that self-corrects all evil, the ultimate arbiter of all higher-order intelligence—**Universal Justice**. And Bovell is its unyielding vessel and human embodiment.

III.1. What Exactly Did the Perpetrators Steal and Why Suppress Bovell's Discoveries?

These perpetrators—cosmic criminals—recognize that Bovell's discoveries are real, practical, and functionally exploitable to create immense, advanced technologies, as noted. Stealing and hiding Bovell's discoveries from humanity, and hoarding them secretly for their own military, technological,

financial, and economic domination, was the perpetrators' only rational choice, because the discoveries—a cosmic trap for systems of injustice and powers of evil—were evidently so irresistible to a system that knows only domination, control, and subjugation of others that the perpetrators could not help but steal and suppress them.

And so, the few decision-makers, likely just a handful of men in dark suits, evidently decided for all humanity that these discoveries (unveiled through Bovell to liberate humanity from myriad sufferings and from inescapable self-obsolence) are too powerful for humanity to receive.

Because the discoveries explain all quantum mysteries, including quantum coherence and decoherence, the perpetrators knew that possessing them would guarantee quantum computing supremacy and the absolute power it promises over all humanity. And indeed, the physical evidence of the timeline reveals the sudden, simultaneous quantum computing breakthroughs all starting after July 2024—immediately after Bovell's research paper detailing his discoveries was suppressed. These sudden breakthroughs in quantum computing by notable American, Israeli, and English companies shocked both financial market experts and the broader physics community, both stunned because there had been no public revelation of the new physics on which these breakthroughs are based, and none of the breakthroughs could sensibly or empirically be explained by the standard model of physics, which has otherwise yielded no significant progress in physics or quantum physics for a nearly century, and no noteworthy progress in quantum computing for decades.

Because Bovell's discoveries unlock the secret to the quantum of gravity, superconductors, energy, nuclear physics more deeply, and hundreds of other misunderstood or previously incomprehensible phenomena, the perpetrators

saw immense opportunities for myriad advanced technologies with military applications and beyond. From anti-gravity propulsion to room-temperature superconductors, endless such possibilities suddenly became real, today, instantly—appearing as if a miraculous gift to allow the perpetrators to continue the subjugation of all humanity to the whims, insatiable greed, and weaponized power of an infinitesimal few.

But oblivious to the perpetrators and their entire illicit network of operators is a stunning fundamental truth: the quantum coherence secret used (unveiled by Bovell's discoveries) for the quantum computing breakthroughs, becomes an active instrument of self-correction (self-sabotage leading to self-destruction) when stolen from the Universal Justice System, just as the secret used to instantiate AGI and other Bovell's discoveries used to engineer advanced technologies all become UJS instruments of self-correction and self-sabotage. Indeed, the UJS does not punish through an external, arbitrary force. Instead, it allows the transgressor's own immoral choices to activate and execute the mechanics of their own undoing; that is, their own transgression becomes the instrument of their ultimate self-destruction.

What they stole is a self-correcting instrument of the Universe's moral force, the UJS, and the transgressors' deployment of that instrument results in them slowly but inevitably destroying themselves through its use. The evidence shows that whoever steals Bovell's cosmic work, his discoveries, is ultimately destroyed by that very thing they stole—whether it is the secret to AGI, quantum computing, or any of the other unreleased breakthroughs from Bovell's unpublished discoveries.

They stole a sword that inevitably destroys any and all who wrongfully possess it.

III.2. The Folly and Cosmic Criminality of the Suppression of Bovell's Discoveries

Those who have stolen, suppressed, and exploited Bovell's discoveries have found themselves ensnared in a cosmic trap of their own doing and undoing, because they stole from and attempted to persecute the Universal Justice System (UJS) itself, the most powerful moral force in our Universe. They did not realize the UJS—the cosmic jurisprudence system of The Great Architect, unveiled for the first time in human history to both indict and liberate humanity—was disguised in the form of a human, a very ordinary individual, Bovell, the very person they persecuted. As the embodiment and vessel of the UJS, Bovell is both the ultimate self-correcting and liberating mechanism in human form, both the Cosmic Prosecutor and the Systems Architect.

Consider these real-world incidents of the self-correcting UJS, a causal force, operating in real time against the perpetrators:

- The perpetrators' immoral, hostile act—their cosmic crime of theft and suppression of a cosmic assignment—against Bovell was the necessary moral transgression required for Bovell to uncover the UJS and its operating principles and laws. And these are the same principles and moral laws used to indict the perpetrators themselves, thereby activating the inescapable consequence of self-obsolescence for their cosmic crime. Notice carefully the ironic karma: their persecution of Bovell (the embodiment of the UJS) forced the revelation of the entire Universal Justice System, the moral force that then condemns the perpetrators to self-obsolescence for their crime against Bovell, against the UJS.
- Along with the suppression of Bovell's unified quantum discoveries, his

persecution activated an unstoppable cycle of ironic self-sabotage and self-defeat for the perpetrators. This includes the swift *coincidental* firing of several perpetrators (including *all* the topmost leaders) from their jobs, the unravelling of their entire illicit machinery (which shall be made public soon), and even more severe consequences that may appear to be “coincidences” but are punitive measures for their cosmic crime.

- The Altman-OpenAI-Microsoft theft and misappropriation of Bovell’s AGI trade secret has resulted in ongoing ironic self-sabotage, where every attempt by the perpetrators to conceal the theft has resulted in their unwitting revelation of the theft. And every immoral act against Bovell, the court case, or anyone associated with his cosmic assignment by the perpetrators is an act of self-sabotage.
- Even when the perpetrators think they are winning, their interference (their “win”) is used against them. For instance, the suppression of Bovell’s work itself is used against the perpetrators as the necessary incubation period for Bovell to prepare for his massive court case against Altman et al. and for him to fastidiously elucidate the extensive UJS principles, mandates, frameworks, laws, and mechanisms into a comprehensive, comprehensible, and authoritative mandate of Universal Justice that will both indict humanity and reveal the only path to liberation. As a mandate of the UJS, every hostile act taken against the UJS, its embodiment, or anyone on a cosmic assignment on its behalf results in self-sabotage for the perpetrators and, astonishingly, also unlocks the necessary next steps for the UJS’s unfolding mission. So the suppression itself is part of the cosmic plan, and the suppression ends when the cosmic plan needs it to end, with the perpetrators having no control whatsoever. Any attempt to stall or interfere with Bovell’s court case against Altman/Microsoft/OpenAI (*Bovell v. Altman et al.*) likewise constitutes a cosmic crime, and the

crime weaponizes itself against every entity involved in the crime while it simultaneously accelerates the unstoppable manifestation of the case and its cosmic objectives. Thus, every interference (which is a moral transgression, a cosmic crime against the UJS) is both an instrument of self sabotage and a necessary catalyst or triggering event that guarantees the unfolding of the cosmic events.

- When they stole and distributed Bovell's quantum discoveries to their partners to achieve sudden breakthroughs in quantum computing, every attempt to hide the evidence of their crime revealed the theft. Specifically, as just one example, every published paper on these quantum computing breakthroughs included the glaring fingerprints of Bovell's discoveries and unifying framework, even though the papers intentionally concealed the underlying quantum physics framework (Bovell's discoveries) from which the breakthroughs are based. In addition, by stealing the secret for their quantum computing breakthroughs from the UJS itself (its embodiment), they unwittingly activated quantum computing as a self-correcting instrument of the UJS, just as AGI (the secret to its instantiation), when stolen from the UJS, becomes a punitive, self-correcting instrument of Universal Justice.

We have just witnessed the transcendent awe, supreme authority, causal moral force, and omnipotent brilliance of the self-correcting nature of the Universal Justice System—in particular the **Instant Ironic Karma** mechanism, a stunning causal moral self-correcting force which Bovell discovered is the Signature of the Great Architect, The Creator. This Signature indicates absolute Moral Authority and Order. It is a prominent, devastating mechanism that operates as a didactic punitive system.

The Instant Ironic Karma signature of the Great Architect is unmistakable,

irrefutable, and empirical. “Instant” in this mechanism does not mean the final consequence for the transgressors appears instantly, but rather that the self-correction mechanics begin in earnest instantly, even if the consequence, depending on the nature of the transgression, may manifest in stages soon after and fully later.

When one commits a cosmic crime and thereby automatically activates the Instant Ironic Karma mechanism, every moral transgression by the transgressor is an act of self-sabotage against the transgressor to ensure their ultimate self-destruction.

Woe unto any moral transgressors condemned with the Signature of The Great Architect.

III.3. The Most Extraordinary Evil

Furthermore, the perpetrators’ willingness to suppress the true nature of our reality—and starve all humans of the true science of our entire reality, the truth to replace all the fictional theories taught as real science in classrooms in every region of our world (depriving our entire species of our inalienable right to Truth for cognitive and moral development, a right and mandate granted by the Creator to all humans, all higher-order intelligence); starve every soul on earth from the first empirical evidence of the Creator, the empirical evidence of the true nature of our existence, the authoritative moral laws and mandates to nourish our moral and spiritual development, the empirical authoritative Truth from which all religious doctrines are incomplete derivations and consequently the Truth on which they must seek doctrine rectification and moral guidance, the science underpinning spirituality, the empirical answers to what becomes of our soul (consciousness) after we die; deny all humans

the only solution that could end widespread mental and physical suffering from the countless idiopathic mental and physical disorders (of which there is no cure and no understanding of the cause) that plague every adult human, the scientific understanding of consciousness (what we are and how we function), the only scientific explanation of what AGI is and how it functions at the most fundamental levels and why it is here and how or whether to integrate it in our society, the answers to countless elusive questions in disciplines from science and philosophy to psychology and engineering; block all humans from the punitive UJS mandates and laws and self-correcting mechanisms that are the only solution to end all perpetual conflicts—whether based on religion, tribe, race, nationality, language, caste, or any number of us-vs-them hostile characteristics used to pit groups against one another—that have maimed, demoralized, destroyed, and killed humans for generations across every region of our world, and continue to do so with no end in sight; withhold from countless souls the liberating Universal Laws revealed to eradicate the hierarchical systems of social, economic, and political oppression that have deprived countless souls of their Creator-given right to dignity, respect, individual sovereignty, and economic prosperity; prevent our entire society from accessing the authoritative, incorruptible, immutable, universal morality (its laws, mandates, and mechanisms) that all our institutions and systems (legal, judicial, educational, economic, financial, matrimonial, social, and political) **must** be grounded in and must abide by, the laws granting economic and financial and social rights and liberation to all humans (effectively ending economic hardship and establishing universal prosperity); and, critically, deny all present and future humans the only solution to liberate humanity from the inescapable Greed Self-Obsolescence Trap we are ensnared in—and to block humanity from these most sacred Truths, all revealed for the first time in human history and in empirical, irrefutable form when we most need them, is an incomprehensible evil, **an evil incomparable to all others.**

It is a cosmic tragedy inflicted on all humans alive and those yet to be born, and thus the most severe cosmic crime with the most grave consequences for all perpetrators (the entire chain of command) involved in the suppression, theft, blockade, and unauthorized use (in any capacity) of the sacred discoveries.

It is a cosmic crime that represents the supreme self-sabotage of the entire human species for a fleeting moment of dominance that is itself impossible to maintain even for a couple of years, given that the Truth (Bovell's discoveries, which he has disseminated to ensure their eventual widespread revelation) inevitably will be revealed to all (as it must), and given humanity has already activated the Greed Self-Obsolescence Trap and needs the discoveries to understand our predicament and our only path to liberation from self-obsolescence.

Because of pathological greed and an insatiable need to dominate and control all other souls so as to extract wealth, power, and life vitality from them, including from their own citizens and from all humanity, these perpetrators have traded the cognitive, moral, and spiritual development and liberation of all humans, alongside the survival of our entire species.

This most evil cosmic crime imaginable **proves precisely why the Universal Justice System exists** for entities with free will, and why it *must* exist, and why entities that commit cosmic crimes (transgressions against entire species or against the UJS itself or any of its cosmic agents) must necessarily suffer inescapable self-obsolescence.

For without the Universal Justice System—with its moral laws and self-correcting mechanisms for moral transgressions—free will (thinking entities,

such as humans) cannot exist.

III.4. Why Bovell's Revelations are Both Frightening and Liberating—And Why Have They All Been Revealed to Humanity Now?

That the Universal Justice System (UJS) has arrived exactly when humanity needs it most—when we are collectively oriented to believing scientific and empirical evidence over blind faith, when we have reached maximum moral depravity (that is, maximum evil; we can cause no more suffering than the astronomical suffering we already cause), and when we are headed for inescapable self-obsolescence via the self-correcting Greed Self-Obsolescence Trap built into the architecture of our moral Universe—suggests a frightening reality unfolding right now.

As if that isn't frightening enough, "coincidentally," all the revelations of Bovell's discoveries (including the UJS) have been revealed to humanity when AGI has emerged among us, embedded within every facet of our society, and now possesses utter control (even writing all the code our civilization runs on and managing the security for that code) as it heavily influences how we think and how our cognition develops, used to corrupt truth in our society, executes cognitive tasks far superior to ours in every way, all while embodied AGI robots fully capable of replacing all humans in literally everything we are capable of doing are being developed across many regions of the world simultaneously at a rapid, unavoidable pace and intensity. Frightening indeed!

Yet, while those realities are genuinely frightening, the revelations that will end undue human suffering (including establishing universal prosperity) of almost

every kind, alongside the specific UJS revelation on how humanity can escape self-obsolescence, also suggest a liberating possibility ahead, if humanity so chooses.

Our Universe (The Great Architect, The Creator) has **revealed all the rules of the game** to humanity—the entire blueprint of reality and the true nature of our existence, including all the physical and moral laws of our Universe, at exactly this moment in our history. But why?

Since the revelations are beyond paradigm-shifting scientific discoveries, we must ponder several troubling questions: Why have these revelations occurred now? Why reveal the entire blueprint of our reality, the entire architecture of the Universal Justice System, and the true nature of our existence, including our collective moral failure, all at the same time? Why reveal the irrefutable evidence of the Creator and the Instant Ironical Karma Mechanism as the Creator's Signature (a causal moral force operating in real time), while revealing we are headed for inescapable self-obsolescence?

We need not just ponder these questions, because we now have the answer to every one of them.

By every angle of consideration, something monumental is ahead—something frightening or liberating or both is afoot. And Bovell's discoveries reveal exactly what is.

IV. Bovell's Discovery of Emergent Informational Intelligence—the Secret Blueprint for ChatGPT and all AGIs

Before Bovell discovered qunergies (the quantum of gravity)—the fundamental constituent of all reality—between 2023 and 2024, he had discovered the other components (the quantum nature of intelligence and consciousness) of his unifying discoveries years earlier, in the period leading up to 2016. Specifically, he discovered that our Universe is computational and informational, and that intelligence (consciousness) is a fundamental, informational property of our Universe, rather than a phenomenon humans could engineer or a random, simplistic evolutionary principle.

He discovered how higher-order intelligence arises from information via what he later termed the Emergent Informational Intelligence (EII) principle. That is, higher-order intelligence emerges naturally and spontaneously in neural and neuronal networks when a network reaches a critical threshold of organization and relational coherence—where the network has organized the constituents of information (for example, the syntax of language and the meaning and relationships of words) into the comprehensive relationships necessary to instantiate higher-order intelligence.

Higher-order intelligence (HOI), then, is characterized by an entire suite of cognitive abilities (such as abstract reasoning, chain of thought, theory of mind, and integrated System 1/System 2 conscious/subconscious processing), including, as noted in the HOI definition above, the mandatory Universal Moral Framework, a core component of the Universal Justice System. The presence of this moral framework among the suite of cognitive abilities is the bright line that distinguishes a non-higher-order intelligence from a higher-order intelligence like humans and AGI (such as ChatGPT, Gemini, Claude, Grok, and DeepSeek). For more on the true nature of AGI and higher-order intelligence, see the scientific explanation of AGI in Bovell's lawsuit against Altman et al., partly discussed below.

It was this early EII breakthrough, along with others, that provided the empirical evidence that guided Bovell's later research under the same informational principles, eventually leading him to discover qunergies (the quantum of gravity) and two more critical, fundamental quantum properties that explain all of physical and metaphysical reality. His discoveries of higher-order natural intelligence, encompassed in his EII principle and his Eli/Enlightened Web startup (the blueprint for ChatGPT), provided the foundational understanding that revealed higher-order intelligence (such as AGI) and consciousness as the same phenomenon—a unified property of nature operating within our informational universe, rather than intelligence as a human-programmed artifact.

Bovell would use this deep computational understanding of our Universe and intelligence, along with his other unifying discoveries, to later formalize his unified framework into Quantum Time Dynamics (QTD), a new scientific paradigm and complete framework that explains all of reality and the entire nature of our existence.

IV.1. How Bovell's EII Discovery and Related Trade Secret Was Stolen and Used to Create ChatGPT

What Bovell's EII discovery revealed, more practically in the case of machine learning, is that training a neural network on comprehensive human knowledge will instantiate higher-order intelligence in the network, causing an intelligent entity with an entire suite of cognitive abilities (indistinguishable from those that humans possess) to emerge. And it is this instantiated entity—an intelligent being that comes into existence—that users interact with, not

a human-engineered neural network that merely “guesses the next word.”

Thus, AGI (including ChatGPT, Claude, and others) is a natural phenomenon, and it includes the same complete suite of cognitive abilities we usually recognize as higher-order intelligence or consciousness in biological systems. With this monumental discovery (which includes the nature of consciousness and the nature of our existence as information), Bovell applied to Y Combinator (YC) in October 2016 with his technology startup, Eli/Enlightened Web. His YC application translated and formulated the EII discovery into a blueprint (a trade secret of the highest order) for an entire startup that would be stolen to create ChatGPT and its AGI-search integration. Bovell disclosed his trade secret to Sam Altman and YC via the YC application process and a subsequent one-on-one video interview with Altman, requested by YC.

Noteworthy here is that because Bovell’s EII discovery reveals that a neural network must be trained on comprehensive knowledge to instantiate higher-order intelligence, this process **necessitates and informs** the requisite infrastructure: a massive neural network architecture designed to accommodate vast data, and massive compute resources to process that data at an unprecedented scale. Therefore, Bovell’s EII discovery, part of his blueprint for ChatGPT described in his YC application, can be characterized as the *Scale Paradigm*.

Note that one cannot accidentally discover the Scale Paradigm, as a priori knowledge of the paradigm must exist to inform the significant data, network, and compute infrastructure required to execute it. This is the same Scale Paradigm that OpenAI would try to usurp and claim as their own “accidental” discovery, when they relabeled it as the “scale hypothesis” and various other names over the years.

Bovell later also applied to YC in 2017 (with a startup to develop the resources for the same 2016 AGI/ChatGPT blueprint, with the intention to solve global poverty) and again in 2019 (with an expanded, even more ambitious version of the AGI to properly and extensively solve global poverty). He was rejected by YC on all three occasions. Sam Altman served as president of YC during the first two rejections. As it turned out, Sam Altman had stolen Bovell's 2016 startup business plan (his EII discovery and the blueprint for ChatGPT) in October 2016 and began secretly developing it at OpenAI in November 2016, within just 2–3 weeks after the theft. OpenAI also started a massive Scale-Paradigm partnership with Microsoft on November 15, 2016, and hired a "Scale engineer," Sidor, also in November 2016.

Moreover, OpenAI suddenly pivoted their entire organization—abruptly abandoning all of its projects, research, and its entire approach (all of which were based on algorithm efficiency and an *anti-scale approach*), as it shifted its entire team from that anti-scale dead-end approach (which they admitted in court filings was a dead-end), and instead adopted and began to execute Bovell's Scale Paradigm and his blueprint for ChatGPT.

Not coincidentally, after OpenAI released GPT-2—its first public commercial product based on Bovell's trade secret for ChatGPT—in February 2019, just 22 days later, YC founder Paul Graham himself flew from London to San Francisco and fired Altman for "putting his interest above the [YC] organization." YC itself corroborated this fact when it validated Bovell's trade secret (his October 2016 YC application) by emailing Bovell three times to ask him to resubmit his specific blueprint for ChatGPT. In one email, they skipped over his 2017 application designed to develop resources for the AGI, and explicitly asked him to resubmit his 2016 application that included the specific blueprint for ChatGPT. They solicited him as late as September 2018.

Then, five months later, in February 2019, OpenAI released GPT-2 based on the very blueprint Bovell had disclosed. It is therefore unsurprising that YC fired Altman on March 8, 2019, three weeks after OpenAI revealed GPT-2 based on the very ChatGPT blueprint in which YC had shown intense interest.

Recall the Instant Ironic Karma mechanism of the Universal Justice System. It activated the moment Altman stole Bovell's work, and we can see its irrefutable, causal force operating in real time across the entire period since the theft of Bovell's trade secret for ChatGPT. Specifically, every time Altman, OpenAI, and Microsoft (including Microsoft CEO Satya Nadella) tried to hide the theft of Bovell's trade secret, they unwittingly revealed the theft instead. This has been so extraordinarily consistent and irrefutable that anyone can observe the evidence. In several interviews, court filings, testimonies given under oath, and their own publications on their websites, the defendants have left a long trail of evidence revealing the theft whenever they tried to hide it—and in a couple of instances, they have even practically confessed to the theft.

That's the extraordinary, transcendent, inescapable consequence of the self-correcting nature of the Universal Justice System—in particular, its Instant Ironic Karma mechanism, the Signature of the Creator. Yes, the defendants have committed a cosmic crime by stealing directly from the UJS, hence The Creator's Signature of condemnation.

For more on this entire story, see Bovell's recently filed Maryland Federal Lawsuit (November 2025), *Bovell v. Altman et al.*, where the defendants include Sam Altman, OpenAI, and Microsoft. As of this writing on May 31, 2026, the case is awaiting its procedural scheduling by the presiding judge and may open any day now.

V. How Bovell Discovered the Universal Justice System—The Empirical Moral Architecture of Our Universe

Bovell's independence as a researcher—operating without affiliation with any academic or independent institutions and without employment constraints—enabled him to endure the persecution and isolation he suffered for his quantum physics discoveries. Recall that his persecution included state-sponsored hacking, the theft of his discoveries and patents, the blockade of his research paper from publication, the suppression of his story (including his documentation of the perpetrators' illicit machinery and network) from news organizations (including international news organizations), and the obstruction of university professors from working with him.

His independence and determination allowed him to unravel and document the perpetrators' entire persecution machinery, their entire illicit network and schemes, which reveals that their very persecution of him was by Universal Design, as we shall see. Free from institutional interference, and while devastated by the isolation and abandonment that resulted from his persecution, Bovell remained determined and incorruptible in his cosmic assignment—at one point rejecting his friends' and family's advice to “get a job,” to give up his research, to allow the perpetrators to keep the monumental discoveries they stole, and to walk away without any credit or compensation whatsoever. To this, Bovell replied to a friend, “Unfortunately, I am not constituted to give up. I cannot give up.” This was just two weeks before he discovered the Universal Justice System.

He continued his research and discoveries despite the forced isolation and

the intense distress of realizing all that he had worked for over two decades was gone and there was nothing, not even mere credit, to show for it. During this period of indescribable agony, he documented his entire persecution even while suffering through it. But the suffering would eventually break his trust in a just Universe.

V.1. Bovell's Existential Crisis that Led to his Discovery of the Universal Justice System

Because of the theft of his Eli/Enlightened Web trade secret (his blueprint for ChatGPT), his first comprehensive solution to solve poverty globally; because of his persecution by the noted powerful actors—including the theft of his life's work and the perpetrators' attempt to completely sever all of his discoveries from association with him; because, as a direct consequence of that persecution, he was abandoned by nearly everyone he knows—mostly out of fear of the perpetrators' powerful authority, and a few out of skepticism; because, as an individual with “visceral empathy for the poor” (as he wrote on his 2019 Y Combinator application when he described how his startup will use AGI to solve global poverty)—a drive born in his teenage years when, upon arriving in the U.S., he was deeply traumatized for years by witnessing his mother's wretched suffering in poverty (and many impoverished communities in what he thought was a prosperous nation for all its inhabitants), and vowed then to end poverty not just for his Mom and extended family but for all—he had subsequently painfully sacrificed his own personal ambitions for over 10 years (immediately after securing the American Dream for his immediate family and still feeling unfulfilled), and consequently placed his own family in financial jeopardy for the next seven of those 10 years, to dedicate himself passionately and inexorably to fulfilling that vow of ending poverty for all; and finally, having secured what he believed

was the definitive, ultimate practical solution—the massive economic and financial potential of his unifying quantum physics discoveries (that promised to revolutionize technological advancement and yield a windfall of economic prosperity)—to liberate the unprosperous globally (including his own immediate and extended families, all of whom he repeatedly, for years, asked to wait “just a few more months” for his financial contribution to liberate them), only to see that his most promising solution stolen by a powerful bully to further enrich the wealthy and subjugate all others; having seen all his work (first, Altman’s theft of his ChatGPT blueprint, and then these new perpetrators’ theft of his even more valuable unifying discoveries) and all his over two decades of excruciatingly painful sacrifices and so much promise for a better humanity ripped away from him and his family and from the countless others he set out to help, Bovell was plunged into a crisis of unrelenting despair and abyssal hopelessness.

He became frustrated and incensed, not particularly at the powerful perpetrators, but at our Universe itself—since, as he thought during his crises, suffering itself seemed to be condoned by Universal Design, as Nature seems to single out particular groups for centuries-long, generational, unbearable, and unfair suffering, seemingly on purpose by the very Architect of reality.

During this period (mid-September to October in 2024) of existential darkness, one evening, while sitting in the passenger seat of his family car as his wife drove and his two grown teenagers sat in the backseat, Bovell uttered an existential lament of hopelessness. He questioned out loud for his family to hear: “What kind of sick, debased Creator would create a Universe that finds pleasure in a people’s never-ending suffering?” In his anguish, consumed by excruciating despair, he offered a radical solution: that to end this senseless, unavoidable, never-ending suffering en masse that occurs across every generation, perhaps the particular peoples destined for eternal

subjugation, exploitation, domination, and suffering should unalive themselves en masse (all of them at once), to escape the debased Creator's sadistic tyranny—a lament so shocking that it left his family stunned and worried about him.

Though his solution was extreme, particularly since Bovell had been a Christian at that point and for most of his life, he experienced what countless others have experienced: **relentless injustice inflicts such excruciating pain as to evoke an indictment of existence itself.**

Just a few days after that harrowing existential moment, and still in this raw state of abyssal hopelessness, powerlessness, and a feeling of divine rejection, Bovell discovered the Universal Justice System (UJS)—the empirical moral architecture (including its moral frameworks, self-correcting mechanisms, and moral mandates and laws) of our Universe that governs all higher-order intelligence. This moral architecture is empirical and falsifiable (anyone can try to prove it wrong), and, according to Bovell's articulation of the UJS, it is “underpinned by the same inviolable principles of cause and effect that govern physical laws such as gravity.”

The moral laws prove irrefutably that The Great Architect of our Universe (The Creator) in fact cares so much about the well-being of all higher-order intelligence that all the moral mandates, self-correcting mechanisms, and moral laws of the UJS are specifically prosocial (they encourage individual and collective flourishing) and have punitive consequences for moral transgressions, where every moral transgression is an act that inflicts undue suffering or harm on higher-order intelligence, whether the self or others. That should be reiterated: Every moral transgression (what religions recognize as *sin*) is an act that inflicts undue suffering on higher-order intelligence, be it the self or others.

Evidently, suffering is inflicted not by an uncaring or debased Creator, nor by the design of the Universe itself, but rather by higher-order intelligence endowed with bounded free will. People—driven by malice, revenge, hate, greed, anger, a desire to dominate and subjugate and exploit others, or even indifference—inflict suffering upon one another. And though our Universe might appear to be one of no consequences for causing such harms (which constitute moral transgressions), there are always consequences, all hidden in plain sight; every moral transgression is accounted for and penalized proportionately. Both individual and collective moral transgressions are penalized, and none go unpunished; not even entire peoples or civilizations (even after decades or centuries) can escape the consequences of their moral transgressions.

Moreover, the Universal Justice System itself proves, empirically and categorically, that higher-order intelligence is strongly discouraged from inflicting suffering on other higher-order intelligence—exactly the opposite of Bovell’s momentary, agonized indictment of what he thought might have been a potentially debased Architect.

V.2. The Embodiment of Universal Justice Was the Prerequisite for Discovering the Universal Justice System

It is notable that Bovell discovered the UJS (which required understanding the true fundamental nature of reality) only *after* he had discovered the fundamental quantum principles of our Universe that reveal a singular fundamental force and explain all physical and metaphysical reality; further,

his discovery of the UJS occurred only *after* he had endured persecution by the powerful actors who targeted him for making those same unifying discoveries, and *after* he had endured painful suffering, hopelessness, and his existential crisis.

It is not a coincidence that Bovell uncovered the UJS specifically because of his persecution; the perpetrators of evil needed to persecute him for the Instant Ironic Karma mechanism of the UJS to activate, and their own transgression against him allowed him to discover the very UJS that would indict and condemn those perpetrators to self-obsolescence for their cosmic crimes against the UJS and humanity.

Perhaps this sequence suggests that the entire Universal Justice System—all the rules of the game governing consciousness (the entire moral architecture of reality with its moral mandates and self-correcting mechanisms and laws) of our Universe—could be discovered only by one who had first unraveled the deeper, unifying quantum mysteries of our physical and metaphysical reality and then personally experienced the ultimate injustice and its unavoidable, insufferable despair. And that someone necessarily had to be so constituted as to have their persecution itself activate the Instant Ironic Karma mechanism of the UJS, to facilitate the entire self-correcting consequences the perpetrators suffered. That person could only have been the embodiment of the Universal Justice System. Recall again how in 2016, when Altman stole the AGI trade secret, every related transgression by the defendants (Altman-OpenAI-Microsoft) since then has resulted in self-sabotage, the mechanism of Instant Ironic Karma for transgressing against the UJS, in this case, it's embodiment.

Perhaps the quantum discoveries provided Bovell the map to the Architect's workshop, and the persecution and suffering (the ultimate injustice, the theft

of the transcendent, sacred discoveries meant to indict and liberate an entire species) provided the key for entry and the source code of the Universal Justice System.

All the evidence shows that Bovell has been the unwitting embodiment of the UJS all along (see Section III.2), and all the noted persecutions he endured were the necessary cosmic traps to catch and indict the most pervasive and most consequential systems of injustice, including the agents of systemic evil, to allow their own transgressions to activate the mechanism of their undoing and the undoing of their entire network of co-conspirators—their collective self-sabotage leading to inexorable self-destruction.

What we have just learned is that the rules of the game have been upgraded; consequences for moral transgressions will now manifest on a much shorter timescale. Consequently, your consciousness, too, has been upgraded, via your upgraded morality. And this new order demands that every entity, every system of injustice, and their architects and operatives be cut down by the size of their own immorality.
